

AECM IN CZECH REPUBLIC

METHOD ON TARGETING SUBMEASURES AND OPERATIONS

Josef Makovský, MoA CZ

AECM

- Integrated production of fruits
- Integrated production of grapevine – 2 schemes
- Integrated production of vegetables – 2 schemes
- Treating grassland
- Grassing over areas
- Biobelts – 2 schemes
- Protection of the lapwing nesting sites
- Grassing over trajectories of concentrated runoff

MINISTERSTVO ZEMĚDĚLSTVÍ
ČESKÉ REPUBLIKY

schemes

AECM targeting

Main methods of targeting particular agricultural areas.

1. Definition of targeted areas based on terrain mapping:

- I. Treating grassland,
- II. Protection of the lapwing nesting sites.

2. Definition of targeted areas based on establishing criteria in LPIS:

- I. Grasing over arable land,
- II. Grasing over trajectories of concentrated runoff.

3. Targeting particular agricultural cultures and crops:

1. Integrated production (fruit, grapevine, vegetables),
2. Biobelts.

AECM targeting

Definition of targeted areas based on terrain mapping.

Two stages: 1) Preparatory – setting conditions for schemes,
2) Implementing – targeting schemes at particular areas.

1. Preparatory stage:

- MoA in cooperation with MoE and payment agency and IAEI,
- based on research, RDP evaluation, ways of management,
- discussion with NGO...etc.

Scheme

- deadlines of cutting/grazing,
- options of overgraze meadows
- options of fertilization and other specific options.

AECM targeting

Definition of targeted areas based on terrain mapping.

2. Implementing stage:

- particular scheme is assigned to a particular area,
- is carried out by authorized bodies of environmental protection and MoA,
- evaluating of areas in terrain,
- assigning scheme and delineating in LPIS

Delineating in LPIS

The screenshot displays the LPIS interface. On the left, a map shows agricultural land parcels outlined in green. A tooltip for parcel 2507 provides details: "2507 Horské suchomilné louky nehnějené", "Termín seče: seč do 31.7.", "Výměra env.: 0,66 ha", "Pastva: Pastva ne". On the right, a data table for HSLN: 540-1200 2507 is shown. The table includes fields for status, effectiveness, area, type, and management. A red circle highlights the 'Důvod vzniku' (Reason for creation) section, which lists several audits and their dates. A blue circle highlights the 'Základní' (Basic) section, which includes details about the parcel's status and management.

Důvod vzniku: Se souhlasem		
Akce	Provedl	Datum
Návrh	● Ovesný Karel	13.05.2016
Audit 0	● Ovesný Karel	13.05.2016
Audit 1	● Suchomelová Bilková Alena	13.05.2016
Audit 2	● Makovský Josef	13.05.2016

Inclusion in commitment

- Delineation is binding in areas of natural parks, Natura 2000 and other areas with higher natural value stipulated by law.
- A farmer cannot opt for a different scheme from the one which is delineated in LPIS for a particular area when entering the AECM commitments.
- In the Czech Republic, submitting the application for being included into the AECM and the uniform application is carried out through a special application “preview”
 - automatic loading of agricultural plots of land/parcels of the applicant ,
 - automatic assigning of a delimited scheme to a particular plot of land/parcel,
 - options to make adjustments from the side of a farmer.

Inclusion in commitment
