Working document

Evaluation Expert Committee 18/9/2013 Rural Development Committee meeting on 19/09/2013

Draft target indicator fiches for Pillar II

+ complementary result indicators (update following political agreement)

(Priorities 1 to 6)

13/09/2013

Draft list of target / result indicators

Focus Area	Target indicator	Complementary result indicators
P1 A Fostering innovation, cooperation, and the development of the knowledge base in rural areas	% of expenditure for the 3 measures: 'Knowlegde transfer & information action' + 'advisory services' + 'cooperation' in relation to the total expenditure for the RDP	
P1 B Strengthening the links between agriculture, food production and forestry and research and innovation, including for the purpose of improved environmental management and performance	Total number of co-operation operations supported under the cooperation measure (groups, networks/clusters, pilot project) [across all focus areas]	
P1 C Fostering lifelong learning and vocational training in the agriculture and forestry sectors	Total number of participants trained [across all focus areas]	
P2 A Improving the economic performance of all farms and facilitating farm restructuring and modernisation, notably with a view to increase market participation and orientation as well as agricultural diversification	% of agriculture holdings with RDP support for investments in restructuring	Change in Agricultural output on supported farms/ AWU
P2 B Facilitating the entry of adequately skilled farmers into the agricultural sector and, in particular, generational renewal	% of agriculture holdings with RDP supported business development plan/investments for young farmers	
P3 A Improving competitiveness of primary producers by better integrating them into the agrifood chain through quality schemes, adding value to agricultural products, promotion in local markets and short supply circuits, producer groups and organisations and inter-branch organisations	% of agricultural holdings supported under quality schemes, local markets and short supply circuits, and producer groups/organisations	
P3 B Supporting farm risk prevention and management	% (of total farms) of farms participating under risk management schemes	
P4 A		
Restoring, preserving and enhancing biodiversity, including in NATURA 2000 areas, areas facing natural or other specific constraints and high nature value farming, and the state of European landscapes	% Forest or other wooded area under management contracts supporting biodiversity + % Agricultural land under management contracts supporting biodiversity and/or landscapes	
P4 B	% of Agricultural land under management	

Focus Area	Target indicator	Complementary result indicators
Improving water management,	contracts improving water management +	
including fertiliser and pesticide management	% of forestry land under management contracts to improve water management	
P4 C	% of Agricultural land under management contracts improving soil management and or preventing soil erosion (ha)+	
Preveenting soil erosion and improving soil management	% of forestry land under management contracts to improve soil management and or preventing soil erosion (ha)+	
P5 A		Increase in efficiency of water use in
Increasing efficiency in water use by agriculture	% of irrigated land switching to more efficient irrigation system	agriculture in RDP supported projects (output/m3 water used)
P5 B		
Increasing efficiency in energy use in agriculture and food processing	Total investment in energy savings and efficiency (€)	Increase in efficiency of energy use in agriculture and food-processing in RDP supported projects (output/MJ energy used);
P5 C		
Facilitating the supply and use of renewable sources of energy, of by-products, wastes, residues and other non food raw material for purposes of the bioeconomy	Total investment in renewable energy production (€)	Renewable energy produced from supported projects (Tonnes of oil equivalent)
P5 D Reducing greenhouse gas and ammonia emissions from agriculture	LU concerned by investments in live-stock management in view of reducing GHG and/or ammonia emissions + % of agricultural land under management contracts targeting reduction of GHG and/or ammonia emissions	Reduced emissions of methane and nitrous oxide (measured in CO ₂ equivalent) Reduced ammonia emissions (measured in CO2 equivalent)
P5 E Fostering carbon conservation and sequestration in agriculture and forestry	% of agricultural and forest land under management contracts contributing to carbon sequestration	
P6 A Facilitating diversification, creation and development of small enterprises and job creation	Jobs created in supported projects (also under 6B (for LEADER))	
P6 B	% of rural Population covered by local development strategies +	
Fostering local development in rural areas	Rural population benefiting from improved services / infrastructures +	
	Jobs created in supported projects (Leader)	
P6 C Enhancing accessibility to, use and quality of information and communication technologies (ICT) in rural areas	Rural Population benefiting from new or improved services / infrastructures (ICT)	

Focus Area	Target indicator	Complementary result indicators

DEFINITIONS IN THE FICHES

Indicator Name

Title of the indicator which will be used in implementing regulation/guidance documents

Indicator code

Alphanumeric identifier

Target indicator

Identification of whether the indicator is a target indicator?

The related priority

Identification of the priority to which the indicator is linked as defined in the Pillar II intervention logic

The related focus area

Identification of the focus area to which the indicator is linked as defined in the Pillar II intervention logic

Definition

Concise definition of the concept, including if the indicator already exists, e.g. AEI, EUROSTAT indicator

Unit of measurement

Unit used to record the value (e.g. ha, tonnes, \in *,* %)

Methodology/formula

Identification of what is needed to transform data from the operation database into value for the indicator

Data required for the individual operation

Data required from the operation database in order to calculate the relevant indicator (e.g. area of solar panels, ha of trees planted per species...). The Units of measurement of these outputs should be specified

Data source/location of the data

Identification of where the data for the indicator comes from, links or other references to data sources (e.g. in EUROSTAT specifying exact tables, FAO, World bank) AEI definitions, regulations establishing indicators, etc

Point of data collection

Point(s) in time at which data is collected (e.g. operation/project approval, completion or during evaluation activities)

Frequency

In principle this would be annual. If annual is not adequate, please specify

Delay

Delay between data collection and data aggregation (where external statistical data is used)

Means of transmission to Commission

Identification of the way in which the data is made available to the Commission (e.g. submitted with enhanced AIR in 2019 or quarterly/annual electronic submission)

Comments/caveats

Comments concerning interpretation of the indicator for monitoring and evaluation purposes and its caveats, if appropriate.

Mention of context indicators specifically linked to this indicator (or required for its calculation).

Indicator Name	% of total public expenditure for fostering innovation and the	
	knowledge base in rural areas	
Indicator code	P1A	
Target indicator	Yes (targets for priority 1 established on the basis of output-type	
_	indicators)	
The related priority	1	
	Fostering knowledge transfer and innovation in agriculture, forestry and	
	rural areas	
The related focus area	1A Fostering innovation, cooperation, and the development of the	
	knowledge base in rural areas	
Definition	Total planned public expenditure for fostering innovation and the	
	knowledge base in rural areas under art. 15 Knowledge transfer and	
	information actions, art 16 Advisory services, farm management and	
	farm relief services and art 36 Cooperation expressed as a percentage of	
	the total RDP planned public expenditure	
Unit of measurement	%	
Methodology/formula	Ratio a/b in %	
	a) Total public expenditure on fostering innovation and the knowledge	
	base in rural areas under art. 15 Knowledge transfer and information	
	actions +	
	Total public expenditure on fostering innovation and the knowledge base	
	in rural areas under art 16 Advisory services, farm management and farm	
	relief services +	
	Total public expenditure on fostering innovation and the knowledge base	
	in rural areas under art 36 Cooperation	
	1) (1) (1) (1)	
	b) Total RDP public expenditure	
	Relevant measures contributing to target:	
	Art. 15 Knowledge transfer and information actions	
	Art 16 Advisory services, farm management and farm relief services	
	Art 36 Cooperation	
Data required for the	a) Realised expenditure for the measures art. 15 Knowledge transfer and	
individual operation	information actions, art 16 Advisory services, farm management and	
-	farm relief services and art 36 Cooperation

data		
Point of data collection	Payments made by PA/MA and declared to the Commission	
Frequency	annual	
Delay	/	
Means of transmission to	Monitoring tables of AIR	
Commission		
Comments/caveats		

Indicator Name	Nbr of cooperation operations planned under the cooperation measure
Indicator code	P1B
Target indicator	Yes (targets for priority 1 established on the basis of output-type indicators)
The related priority	1
	Fostering knowledge transfer and innovation in agriculture, forestry and rural areas
The related focus area	1B Strengthening the links between agriculture, food production and forestry
	and research and innovation, including for the purpose of improved
	environmental management and performance
Definition	Number of cooperation operations (groups, networks/clusters, pilot projects)
	financed under co-operation supported under art. 36 Cooperation.
Unit of measurement	Nbr
Methodology/formula	
	Relevant measures contributing to target:
	Art. 36 Co-operation
Data required for the	Nbr of EIP operational groups to be supported (establishment and operation)
individual operation	and nbr of other cooperation operations (groups, networks/clusters, pilot
	projects) to be supported under Co-operation (art. 36)
Data source/location of	MA/PA operations database (output indicator) from application forms
the data	
Point of data collection	data collected at application level but reported when the operation is
	completed
Frequency	annual
Delay	/
Means of transmission	Monitoring tables of AIR
to Commission	
Comments/caveats	

Indicator Name	Nbr. of participants trained under Knowledge transfer and information
	actions
Indicator code	P1C
Target indicator	Yes (targets for priority 1 established on the basis of output-type indicators)
The related priority	1
	Fostering knowledge transfer and innovation in agriculture, forestry and rural
	areas
The related focus area	1C Fostering lifelong learning and vocational training in the agriculture and
	forestry sectors
Definition	Total number of participants trained under Knowledge transfer and
	information actions supported by RDP under art.15
Unit of measurement	Nbr.
Methodology/formula	1
	Relevant measures contributing to target:
	Art. 15 Knowledge transfer and information action
Data required for the	Nbr. of participants trained under Knowledge transfer and information action
individual operation	(measure art.15)
Data source/ location of	Nbr. of participants trained: MA/PA operations database (output indicator)
the data	
Point of data collection	data collected at application level but reported when the operation is
	completed
Frequency	annual
Delay	
Means of transmission	Monitoring tables of AIR
to Commission	
Comments/caveats	

Indicator Name	% of agriculture holdings with RDP support for investment in	
	restructuring	
Indicator code	P2A	
Target indicator	Yes	
The related priority	P2	
	Enhancing farm viability and competitiveness of all types of agriculture	
	in all regions and promoting innovative farm technologies and	
	sustainable management of forest	
The related focus area	P2A Improving the economic performance of all farms and facilitating farm	
- 110 1 01000	restructuring and modernisation, notably with a view to increase market	
	participation and orientation as well as agricultural diversification	
Definition	Total number of farm holding receiving support for investment in restructuring	
	under art. 18 over the programming period expressed as a percentage of the	
	total number of agricultural holdings in base year for the RDP area	
Unit of measurement	Nbr.	
	%	
Methodology/formula	Ratio a/b in %	
	a) Total number of farm holding receiving support for investment in	
	restructuring under art. 18 over the programming period	
	b) Total number of agricultural holdings in base year for the RDP area.	
	Relevant measures contributing to target (programmed under this focus area):	
	Art.18: investment in physical assets	
Data required for the	a) Total number of farm holding receiving support for investment in	
individual operation	restructuring under art. 18 over the programming period (cumulative)	
	b) Total number of agricultural holdings in base year for the RDP area	
Data source/ location of	a) Total number of farm holdings receiving support for investment in	
the data	restructuring: MA/PA operation database (output indicator)	
	b) Total number of agricultural holdings: Eurostat: Farm Structure Survey	
Point of data collection	a) Total number of farm holdings receiving support for investment in	
	restructuring: data collected at application level but reported when the	
	operation is completed	
10	b) Total number of agricultural holdings: /	
Frequency	a) Total number of farm holdings receiving support for investment in restructuring: annual	
	b) Total number of agricultural holdings: /	
Delay	a) Total number of farm holding receiving business start-up aid for young	
Delay	farmers: /	
	b) Total number of agricultural holdings: /	
Means of transmission to	a) Monitoring tables of AIR	
Commission	a) Wolfforing words of Mix	
Comments/caveats	The available base year for the total number of agricultural holdings might not	
Comments/Caveats	be 2013 when RDP are drafted (depending on statistics availability). Update	
	will be needed.	
	will be needed.	

Indicator Name	Change in agricultural output *
Indicator code	P2A Result
Target indicator	No
The related priority	P2
	Enhancing competitiveness of all types of agriculture and enhancing farm
	viability
The related focus area	2A Improving the economic performance of all farms and facilitating farm
	restructuring and modernisation, notably with a view to increase market
	participation and orientationas well as agricultural diversification
Definition	Change in output per Annual Work Unit in RDP supported projects
Unit of measurement	€/AWU
Methodology	Evaluators will survey a sample of completed operations in relation to this
Wiethodology	
	focus area and establish the changes in the value of output and labour input
	due to the implementation of the projects.
	An appropriate sample will be selected based on project and beneficiary
	characteristics included in the operations database.
	The indicator value will be calculated using data from the survey (e.g. farm
	accounts information, changes in labour use).
	It is the net effect of RDP support which should be assessed. Since many
	other factors can influence this indicator value (commodity prices, weather
	etc.), the sample of supported projects/beneficiaries should be compared
	with a sample of similar enterprises which did not receive support in order
	to assess the net effect of the aid. Information for this control group could be
	selected from FADN, national census data, FSS or other appropriate
	sources.
	Results obtained from the survey should then be extrapolated to population
	level in order to calculate the indicator value i.e. the net change in output
	linked to RDP support. The total value should reflect the contribution of
	projects flagged as contributing to the Focus Area, both as main and
	secondary objective. Detailed guidance on the methodology to be used will
	be provided, including on the use of control samples, and accounting for
	farm diversification projects.
Data required	Identification and basic characteristics (size, type) of projects with a
Data required	competitiveness component (from the operations database)
	competitiveness component (from the operations database)
	Information from the completed project on the situation before and after
	project implementation (output, labour input).
Point of data collection	Relevant projects will be identified from application forms, and will be
Foint of data confection	visible in the operations database. Relevant projects fall into two categories:
	1. Those accepted under Focus Area 2A where the main objective is
	-
	facilitating farm restructuring. These are directly linked to P2A
	2. Those whose main objective is linked to another focus area (e.g.
	renewable energy, water efficiency) but which also have an impact on farm
	restructuring and competitiveness. These are identifiable from the operations
	database using the "secondary effects" field.
	Information on completed projects to be collected from beneficiaries by
	evaluators.
	Control groups: FADN, national census data, FSS
Frequency	Three times during the programming period:
- 1J	2016; 2018; ex-post
Means of transmission to	Enhanced AIR 2017
wicans of transmission to	Liminoto I III 2017

Commission	Enhanced AIR 2019
	Ex-post evaluation report
Comments/caveats	It is proposed that the Evaluation Plan drawn up as part of each RDP should provide for the results of the RDP to be assessed using this indicator and appropriate methodology (for which guidance will be provided) in order to ensure input for the enhanced AIRs in 2017 and 2019 (so that these reports can assess progress towards achieving the objectives of the programme as required by Article 44 (3) and (4) of the CPR), and to provide a final assessment at the end of the programming period. This indicator is intended to capture the increase in competitivity on farms receiving RDP support. This can be achieved either through increasing output for the same use of resources, or maintaining output levels but reducing the resources required to produce them. Labour is used as the resource unit for comparison because it is often the key variable within farming systems, closely linked to providing adequate household income. For example reducing the farm labour requirement can free labour for off-farm employment or diversification. The results obtained can be analysed and presented in various ways to show for example the effects on different types of farms, or to compare the efficiency of different types of project. Income per labour unit would provide a more accurate indication of change in the standard of living, but it was considered important to select an
	indicator which could be easily calculated, both for the supported sample and the control group, thus output was selected.

Indicator Name	% of agriculture holdings with RDP supported business development plan	
	for young farmers	
Indicator code	P2B	
Target indicator	Yes	
The related priority	2	
	Enhancing farm viability and competitiveness of all types of agriculture	
	in all regions and promoting innovative farm technologies and	
	sustainable management of forest	
The related focus area	2B Facilitating entry of adequately skilled farmers into the agricultural sector	
	and in particular generational renewal	
Definition	Total number of farm holding receiving business start-up aid for young	
	farmers under art. 20 over the programming or total number of farm holdings	
	supported for investment targeting young farmers under art. 18 period	
	expressed as a percentage of the total number of agricultural holdings in base	
	year for the RDP area	
Unit of measurement	Nbr.	
	%	
Methodology/formula	Ratio a/b in %	
	a) Total number of farm holding receiving business start-up aid for young	
	farmers over the programming period or	
	total number of farm holdings supported for investment targeting young	
	farmers over the programming period	
	b) Total number of agricultural holdings in base year for the RDP area.	
	The toward is board on the law (sub) massure for young forman (VE) mading	
	The target is based on the key (sub)measure for young farmers (YF) needing support to set up their holding (business development (Article 20), start up aid	
	YF) compared to the total number of (existing) agricultural holdings.	
	In case business development (Article 20) 'start up aid YF' is not programmed	
	as the key measure under this Focus Area (based on the RDP strategy): farm	
	holdings (y) supported under the measure physical investment (Article 18) is	
	used in the calculation of the target (only if art. 20 is not programmed to avoid	
	double counting).	
	Relevant measures contributing to target:	
	Art.20: farm and business development or	
	Art.18: investment in physical assets	
Data required for the	a) Total number of farm holding receiving business start-up aid for young	
individual operation	farmers under art. 20 (cumulative) or	
	or total number of farm holdings supported for investment targeting young	
	farmers under art. 18 (cumulative)	
	b) Total number of agricultural holdings in base year for the RDP area	
Data source/ location of	a) Total number of farm holdings receiving business start-up aid for young	
the data	farmers or total number of farm holdings supported for investment targeting	
	young farmers: MA/PA operation database (output indicator)	
D • • • • • • • • • • • • • • • • • • •	b) Total number of agricultural holdings: Eurostat: Farm Structure Survey	
Point of data collection	a) Total number of farm holding receiving business start-up aid for young	
	farmers total number of farm holdings supported for investment targeting	
	young farmers: data collected at application level but reported when the	
	operation is completed	
Engage are	b) Total number of agricultural holdings: /	
Frequency	a) Total number of farm holding receiving business start-up aid for young	

	farmers total number of farm holdings supported for investment targeting
	young farmers : annual
	b) Total number of agricultural holdings: /
Delay	a) Total number of farm holding receiving business start-up aid for young
	farmers total number of farm holdings supported for investment targeting
	young farmers: /
	b) Total number of agricultural holdings: /
Means of transmission	a) Monitoring tables of AIR
to Commission	
Comments/caveats	The available base year for the total number of agricultural holdings might not
	be 2013 when RDP are drafted (depending on statistics availability). Update
	will be needed.

Indicator Name	% of agricultural holdings supported under quality schemes, local	
	markets and short supply circuits, and producer groups	
Indicator code	P3A	
Target indicator	Yes	
The related priority	3 Promoting food chain organisation, including processing and	
	marketing of agricultural products, animal welfare and risk management	
	in agriculture	
The related focus area	3A	
	Improving competitiveness of primary producers by better integrating them	
	into the agri-food chain through quality schemes, adding value to agricultural	
	products, promotion in local markets and short supply circuits, producer	
	groups and inter-branch organisations	
Definition	Total number of agricultural holdings receiving support over the programming	
	period under RDP through art. 17 Quality schemes for agricultural products	
	and foodstuffs, art. 28 Setting up of producer groups and organisations and art.	
	36 Co-operation (only cooperation among supply chain actors) as a percentage	
	of the total number of agricultural holdings in base year for RDP area.	
Unit of measurement	%	
Methodology/formula	Ratio a/b in %	
	a) Total number of agricultural holdings receiving support over the	
	programming period under Quality schemes for agricultural products and	
	foodstuffs (art. 17) +	
	Total number of agricultural holdings receiving support over the programming period under Setting up of producer groups and organisations (art. 28) +	
	Total number of agricultural holdings receiving support over the programming	
	period under Co-operation (only cooperation among supply chain actors) (art.	
	36)	
	b) Total number of agricultural holdings in base year for the RDP area	
	of rotal number of agricultural notatings in onseryour for the right and	
	Relevant measures contributing to target:	
	Art. 17 Quality schemes for agricultural products and foodstuffs	
	Art. 28 Setting up of producer groups and organisations	
	Art. 36 Co-operation	
Data required for the	a) Total number of agricultural holdings receiving support over the	
individual operation	programming period under Quality schemes for agricultural products and	
	foodstuffs under art. 17, Setting up of producer groups under art. 28 and	
	organisations and Co-operation (only cooperation among supply chain actors)	
	under art. 36

Indicator Name	Increase in efficiency of water use in agriculture
Indicator code	P5A Result
Target indicator	No
The related priority	P5
	Promoting resource efficiency and supporting the shift towards a low carbon
	and climate resilient economy in agriculture, food and forestry sectors
The related focus area	5A Increasing efficiency in water use by agriculture
Definition	Increase in efficiency of water use in agriculture in RDP supported projects
	The indicator is related to AEI 7 (Irrigation) and AEI 20 (water abstraction)
Unit of measurement	Change in m ³ water used/standard unit of output
Methodology	Evaluators will survey a sample of completed operations in relation to this
	focus area and establish the changes in water use and output, and hence the
	increase in efficiency of water use, through implementation of the projects.
	An appropriate sample will be selected based on project and beneficiary
	characteristics included in the operations database.
	The indicator value may be calculated directly from data from the survey (e.g.
	crop output and water consumption) and/or may be combined with other
	information (e.g. standard output values or coefficients for water consumption
	of different irrigation technologies), in order to calculate indicator values. The
	same output values should be used for the before and after calculations to
	avoid distortions due to commodity price variability.
	Results obtained from the survey should then be extrapolated to population
	level in order to calculate the indicator value i.e. the increase in efficiency of
	water usage. The total value should reflect the contribution of projects flagged
	as contributing to the Focus Area, both as main and secondary objective.
	Detailed guidance on the methodology to be used will be provided, in
	particular to ensure a viable and consistent approach to aggregation of data.
Data required	Identification and basic characteristics (size, type) of projects with a water
	saving/efficiency component (operations database)
	Information from the completed analysis of the dispetition before and often
	Information from the completed project on the situation before and after
	project implementation (technology used, size of infrastructure, water use,
	output)
	Standard output value figures for different crops (FADN); coefficients for
	water use of different irrigation technologies
Point of data collection	Relevant projects will be identified from application forms, and will be visible
Tomit of data conceiton	in the operations database. Relevant projects fall into two categories:
	1. Those accepted under Focus Area 5A where the main objective is increasing
	water efficiency. These are directly linked to P5A
	2. Those whose main objective is linked to another focus area (e.g. farm
	restructuring) but which also have an impact on water efficiency. These are
	identifiable from the operations database using the "secondary effects" field.
	Information on completed projects to be collected from beneficiaries by
	evaluators.

Indicator Name	Reduced emissions of methane and nitrous oxide
Indicator code	P5D Result (1)
Target indicator	No
The related priority	P5
The related priority	Promoting resource efficiency and supporting the shift towards a low carbon
	and climate resilient economy in agriculture, food and forestry sectors
The related focus area	5D Reducing nitrous oxide and methane emissions from agriculture
Definition	Reduced emissions of greenhouse gas and ammonia from agriculture in RDP
Beilintion	supported projects
	supported projects
	The indicator is related to AEI 19 (GHG emissions)
Unit of measurement	CO ₂ Equivalent
Methodology	Evaluators will survey a sample of completed operations in relation to this
, internotionally	focus area and establish the changes in emissions of methane and nitrous oxide
	due to the implementation of the projects.
	An appropriate sample will be selected based on project and beneficiary
	characteristics included in the operations database.
	The indicator value will be calculated using a combination of data from the
	survey (e.g. changes in livestock numbers, husbandry practices, manure
	storage/handling technology) and standard emission factors to transform the
	activity data into emission savings. Results obtained from the survey should
	then be extrapolated to population level in order to calculate the indicator
	value i.e. the reduction in emissions of methane and nitrous oxide. The total
	value should reflect the contribution of projects flagged as contributing to the
	Focus Area, both as main and secondary objective. Detailed guidance on the
	methodology to be used will be provided, including standard coefficients.
Data required	Identification and basic characteristics (size, type) of projects with a GHG
	reduction component (operations database)
	Information from the completed project on the situation before and after
	project implementation (scale, management practices, technology used)
	Coefficients for CHC aminimum also describe
	Coefficients for GHG emissions related to specific management practices,
	production technologies etc Absolute net GHG emissions (CH4 and N2O) are reported in tonnes of CO2
	equivalent. GHG are accounted on the basis of their global warming potential
	(GWP) over a 100 year period. GWO values are taken from IPCC(2007) CO2
	=1; CH4 = 25; N2O=298
	Emission factors are obtained from national emission inventories or from
	specific research projects.
Point of data collection	Relevant projects will be identified from application forms, and will be visible
	in the operations database. Relevant projects fall into two categories:
	1. Those accepted under Focus Area 5D where the main objective is reducing
	GHG and ammonia emissions. These are directly linked to P5D
	2. Those whose main objective is linked to another focus area (e.g. farm
	restructuring) but which also have an impact on GHG emissions. These are
	identifiable from the operations database using the "secondary effects" field.

Comments/caveats	It is proposed that the Evaluation Plan drawn up as part of each RDP should provide for the results of the RDP to be assessed using this indicator and appropriate methodology (for which guidance will be provided) in order to ensure input for the enhanced AIRs in 2017 and 2019 (so that these reports can assess progress towards achieving the objectives of the programme as required by Article 44 (3) and (4) of the CPR), and to provide a final assessment at the end of the programming period.

Indicator Name	Reduced emissions of ammonia from agriculture NEW
Indicator code	P5D Result (2)
Target indicator	No
The related priority	P5
Priority	Promoting resource efficiency and supporting the shift towards a low carbon and
	climate resilient economy in agriculture, food and forestry sectors.
The related focus area	5D Reducing greenhouse gas and ammonia emissions from agriculture.
Definition	Reduced emissions of ammonia from agriculture in RDP supported projects
	The indicator is related to AEI 18 (Ammonia emissions from agriculture)
Unit of measurement	Tonnes of ammonia
Methodology	Evaluators will survey a sample of completed operations in relation to this focus
<i>6</i> 0	area and establish the changes in emissions of ammonia due to the implementation
	of the projects.
	An appropriate sample will be selected based on project and beneficiary
	characteristics included in the operations database.
	The indicator value will be calculated using a combination of data from the survey
	(e.g. changes in livestock numbers, husbandry practices, manure storage/handling
	technology) and standard emission factors/coefficients to transform the activity data
	into emission savings. Results obtained from the survey should then be extrapolated
	to population level in order to calculate the indicator value i.e. the reduction in
	emissions of ammonia. The total value should reflect the contribution of projects
	flagged as contributing to the Focus Area, both as main and secondary objective.
	Detailed guidance on the methodology to be used will be provided, including
	standard coefficients. As far as practicable, emissions should be estimated using a
	methodology compatible with that applied in the national inventory.
Data required	Identification and basic characteristics (size, type) of projects with an ammonia
	reduction component (operations database)
	Information from the completed project on the situation before and after project
	implementation (scale, management practices, technology used).
	Coefficients for ammonia emissions related to specific management practices,
	production technologies, etc.
	production technologies, etc.
	Absolute net ammonia emissions (NH ₃) are reported in Tonnes of ammonia,
	(The total could also be broken down by subcategory to match national data
	collection: Inorganic N-fertilizers; Cattle dairy; Cattle non-dairy; Swine; Laying
	hens; Broilers; Other.)
	Standard emission factors are obtained from guidance sources such as the
	EMEP/EEA Air Pollutant Emission Inventory Guidebook
	http://www.eea.europa.eu/publications/emep-eea-guidebook-2013, national
	emission inventories or from specific research projects.
Point of data collection	Relevant projects will be identified from application forms, and will be visible in the
	operations database. Relevant projects fall into two categories:

Comments/caveats	Data source should be the business plan not a separate projection in order to
	avoid the risk of exaggeration. "Maintained jobs" are not taken into account as
	too problematic to assess

Indicator Name	% of rural population covered by local development strategies
Indicator code	P6B (1)
Target indicator	Yes
The related priority	6
	Promoting social inclusion, poverty reduction and economic development
	in rural areas
The related focus area	6B Fostering local development in rural areas
Definition	% of rural population covered by LAGs funded through the RDP under
	Art. 42-45 LEADER
Unit of measurement	Nbr.
	%
Methodology/formula	Ratio a/b in %
	a) Total number of rural population covered LAGs funded through the
	RDP Art. 42-45 LEADER over the programming period
	b) Total rural population covered in the RDP area
	Relevant measures contributing to target:
	Art. 42-45 LEADER
Data required for the	a) Total rural population covered by LAGs funded under Art. 42-45
individual operation	LEADER
	b) Total rural population covered by the RDP area
Data source/ location of	a) Total rural population covered: MA
the data	b) Total rural population covered by the RDP area: national or regional
	statistics
Point of data collection	a) Total rural population covered: Recorded at selection of LDS by MA,
	after each selection round
	b) Total rural population covered by the RDP area: depending on national
	or regional statistics systems
Frequency	a) Total rural population covered: annual
	b) Total rural population covered by the RDP area: depending on national
	or regional statistics systems

Indicator Name	Rural population benefiting from new or improved services /
	infrastructures
Indicator code	P6B (3)
Target indicator	Yes
The related priority	6
	Promoting social inclusion, poverty reduction and economic
	development in rural areas
The related focus area	6B Fostering local development in rural areas
Definition	Population benefiting from improved services/infrastructures
	supported under RDP through art. 21 Basic services and village
	renewal in rural areas
Unit of measurement	Nbr.
Methodology/formula	/
	Relevant measures contributing to target (when programmed under this
	focus area):
	Art. 21 Basic services and village renewal in rural areas
	The definition of the benefiting population is the potential users: size
	of the population in the area (e.g. municipality, group of
	municipalities) benefiting from the service/infrastructure.
Data required for the	Population benefiting from improved services/infrastructures
individual operation	supported under RDP through art. 21
Data source/ location of the	MA/PA operation database
data	
Point of data collection	Data collected in the application (Local Administrative Units
	concerned + population) but used when the action is completed
Frequency	annual
