

## **Inspiring Programming for Living European Mountains by 2020**

Conference co-organised by the Italian Rural Network and Euromontana 6-7 June 2013
ROMA EVENTI – Fontana di Trevi
Piazza della Pilotta, 4
00187 Rome - Italy

Overview on the mountain policies in OECD Countries: governance solutions, innovative approaches

#### **Thomas Dax**

Bundesanstalt für Bergbauernfragen, Vienna, Austria (Federal Institute for Less-Favoured and Mountainous Areas)

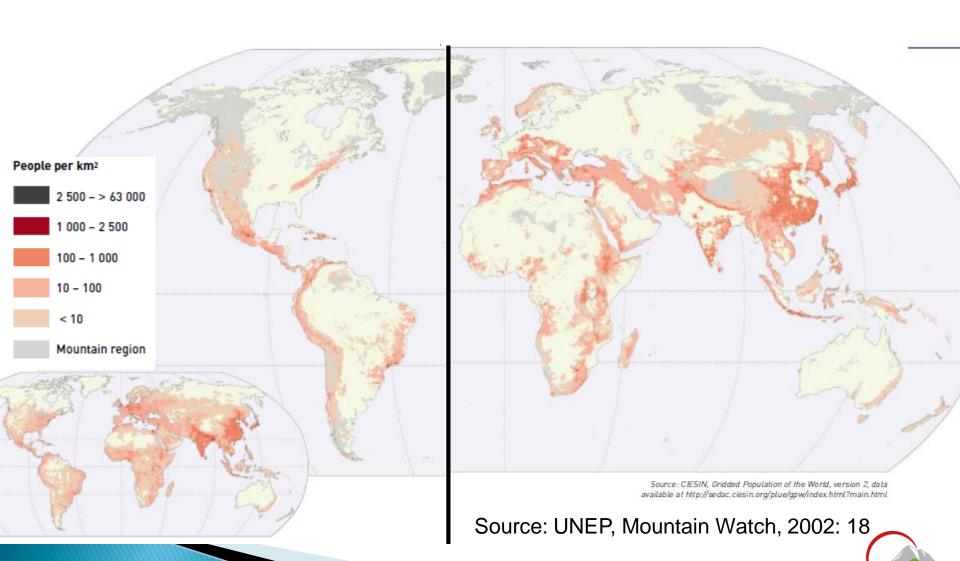

# OECD – GOV / TDPC establishing a territorial perspective

- Organisation for Economic Co-operation and Development
- Territorial Development Policy Committee (WPTI, WPURB and WPRUR)
- internationally agreed Regional Typology:
   PU IN PRC and PRR
- Mountains, regions with geographic specificities (EU: 29% of area and 13% of population; global: 24% area/ 20% population; in 53 countries more than 50% of territory)

## Population in mountain areas

and worldwide (inset)

**BERGBAUERNFRAGEN** 

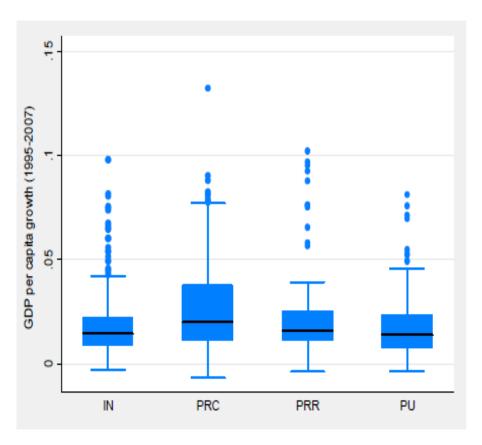

## Innovation in rural regions

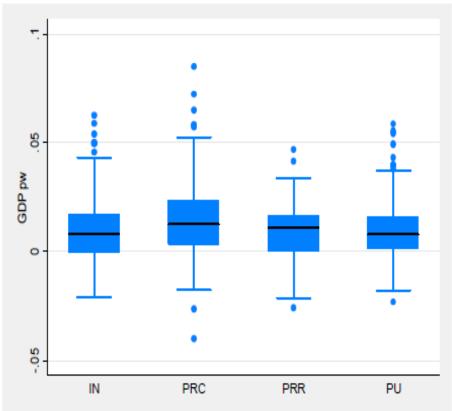

- Understanding regional growth: "Regions Matter" (2009)
- A more effective approach to sustainable regional development
- Policy messages and governance
- → Shaping a New Rural Paradigm (NRP; 2006); assessing regional performance (territorial reviews), revisiting NRP (OECD Rural Development Conferences) and promoting urban-rural linkages (RURBAN project)

## GDP per capita and productivity growth

by OECD regional types, 1995-2007

Source: OECD 2012a: 11

## How do rural regions perform?

- More than half of OECD population in non-urban regions (fairly stable proportion over last 15 years)
- Rural regions lower economic base, but: highest rate of growth in GDP per capita and productivity (part. PRC)
- Demographic development: PRC attract population;
   PRR population decline;
   increasing immigration in rural regions
- PRR part. hit by effects of crisis since 2008
- Need for a differentiated rural policy

Source: OECD 2012a

## **OECD** rural policy dialogue

- "Innovation" and "modernisation": key aspects to trigger regional performance
- Learn from successful country experiences
- Adjust rural development policies to changing rural context

#### Implications:

- Strengthen internal and external markets; focus on human capital; understand entrepreneurship and innovation
- Change narrative on rural areas, to make use of opportunities
- Place-based approach addressing location specific assets and policy coherence (transition to practice of NRP)

Source: OECD 2012b

## Scope of mountain policy approaches

wide variation of approaches towards mountain policies

- Sectoral policies (addressing mountain specificities)
- Multi-sectoral development recognised (coordination activities)
- More integrated policy approaches (mountain laws, "mountain policy");
   Territorial Cohesion and mountain areas

## Mountain policy framework

Recent stronger **territorial** orientation (sector policies, CAP, SF, including trans-border cooperation and Territorial Cohesion)

- Main sector policies
   (agriculture, forestry, tourism, infrastructure, public services; environment, risk management, nature conservation; spatial planning)
- Trans-national cooperation (including international agreements: Alpine and Carpathian Conventions; Interreg programmes)
- Integrated approaches (pilot action, including Leader in mountains, national priorities and action)
- Mountain development discourse (research and development: Mountain Forum, Rio/Johannesburg process, IYM 2002, Mountain Partnership, SARD-M "remunerating positive externalities")

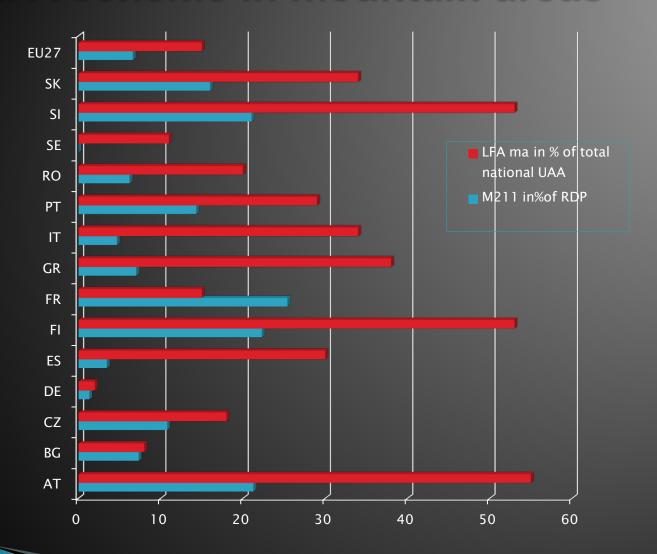

#### **Territorial dimension of CAP**

#### Main findings (ESPON project 2.1.3):

- Pillar 1 in favour of core areas,
- regions with larger farms: higher levels of support
- fruit or vine production: less support
- positively correlated with accessibility
- Pillar 2 with limited compensation effect:
- regions of northern Europe: prioritise agrienvironment and LFAs
- RDP funds, based on historical spend
- co-financing requirements restrict shifts towards pillar 2 spending

## LFA scheme in mountain areas

Source: EC 2009

#### Local action in mountain development

#### Need for innovative approaches beyond LFA scheme

- Bottom-up approaches (since 1970s), pilot action towards mainstreaming (Leader etc., community capacity building, cooperation – governance)
- Two aspects of local capacity building:
  - "diversification" of farm households
  - general spatial relevance of rural action (types of rural regions)
- Best-practice and success dimensions

#### Lessons from project examples in mountain regions

- Professionalization in region-specific production and services (processing und marketing, tourism and linkages, new services, wood/energy, cultural landscapes, water resources ...)
- (2) Address high quality production ("mountain products" label)
- Focus on skills development, capacity building and enhancement of community development
- (4) Role of participation in local initiatives
- valuation of positive externalities provided by mountain areas to external regions
- harness mountain amenities, and apply multi-sectoral approaches

#### Success factors

- Professionalising local action
- Develop/review local strategies
- Local network structures (local actors/interest groups; particiaption and cooperation; institutional development)
- Development path (from disadvantage to amenities; diversity a potential; role of "change"; evaluation processes)
- Trans-regional linkages (regional development agencies: to promote internal/external relationships; institutions to reflect experiences; exchange with external areas)
- Rural innovation:
   enabling innovation (all spheres)
   focus on amenities of mountain areas
   address complex system of innovation (product,
   socio-cultural, institutional) and
   of regional governance (multi-level gov.)

## Key policy messages – for effective regional governance

- Rely on responsible institutions (coordinator)
  - → mechanisms for dialogue and coordination (vertical/horizontal)
- Install strategic public support (long-term committment, targeted and place-based approach)
- Work at appropriate scale(s) for supplying local public goods and services
- Address spatial relationships (trans-regional; urbanrural; mountain-lowland)
- Strengthen local capacity and nurture rural amenities
- Ensure policy learning (evaluation experience)

#### Thank you for your attention
